Liquids

A liquid moves smoothly.

We say that it flows.

From one place to another -

How quickly it goes!

Your desk is a solid,

And so is your chair.

Just look in your classroom -

Wow! They're everywhere!

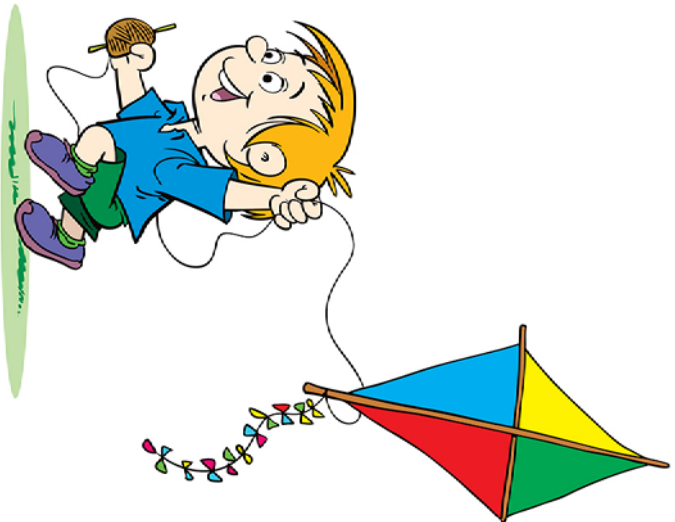

Solids

A solid's a solid,
It doesn't change shape.
It can't move around,
It stays in one place.

We know that most liquids
Are easy to see.
With no shape of their own,
They're not like you and me.

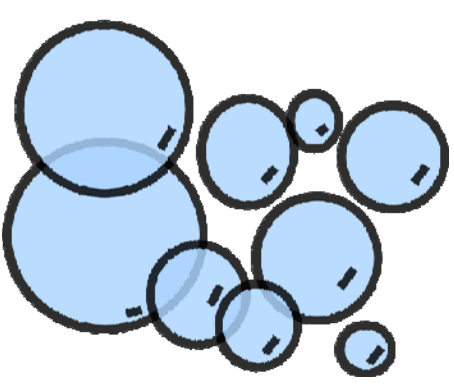

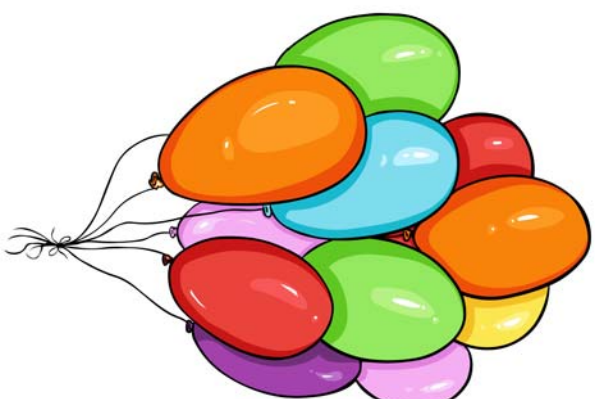

Gases

Air is a gas.

We can't see it, that's true;

But often we feel it

In things that we do.

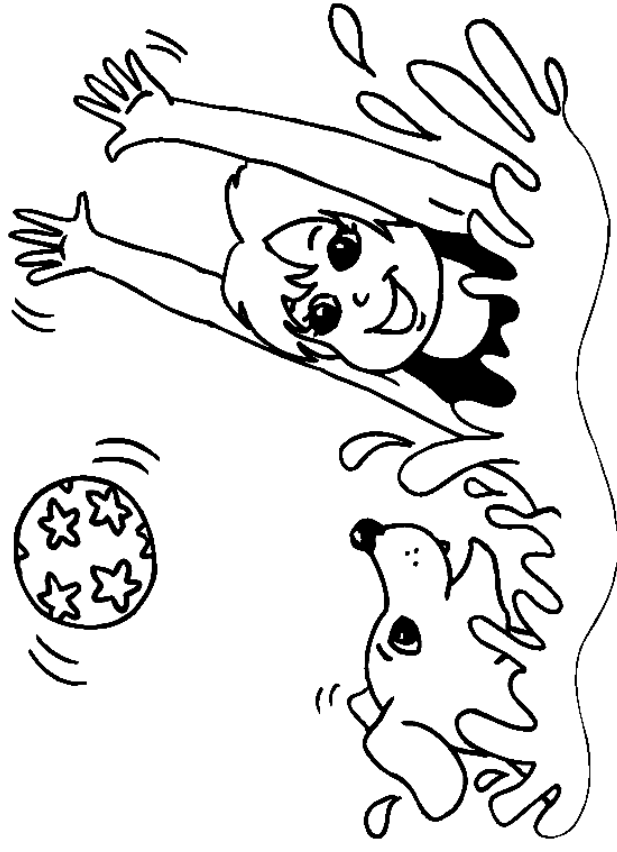

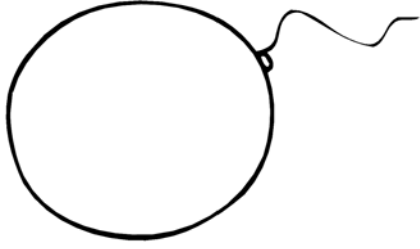

It keeps up a kite.

Air fills up a bubble.

Without it to breathe,

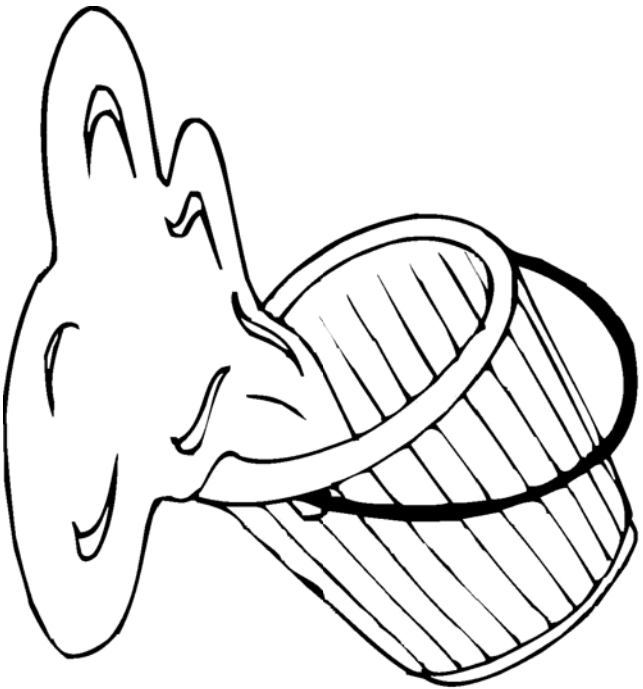

We would be in BIG trouble!
