Math Masters

Grade Two

These reproducible sheets may be used to increase the speed, accuracy and fluency of the math skills in Grade Two.

To use these sheets for timed exercises, hand out the papers with the math questions face down. Put the student's name on the back. At your signal they turn the papers over and work as quickly as possible, beginning at the top left question and working across or down the rows without missing any questions. At two minutes, say "Stop!" and have each child draw a yellow hi-lighter over the answers completed. Put the hi-lighter away. Then give them time to complete the sheet.

Count the number of correct answers in the timed section and divide this score by 2 to find the per/minute score. The students can record or graph the results. The children can work to improve their individual scores. Then count the number of correct answers on the page and multiply by 2 to find the percent score. Complete the top of the page and record the scores.

Index

Two digit subtraction	
with re-grouping	94 - 103
Multiplication to 25	04 - 107
Division to 25 -----	108 - 111

Individual Record Graph

Rules for addition to 10

Rule 1 - Always begin to add with the largest number.

If the question is $3 + 6 =$, add it as $6 + 3 =$.

Rule 2 - Questions adding one are easy. Count on one number.

Rule 3 - Questions adding two are easy, too. Count on two numbers.

Rule 4 - Doubles are easy, too. These are to be memorized. ($3 + 3$, $4 + 4$, $5 + 5$)

Rule 5 - If the numbers are just one apart, double the smaller number and add one.

$$4 + 3 = 3 + 3 + 1$$

How many questions are left? $5 + 3$, $6 + 3$, $7 + 3$ and $6 + 4$. If the student can count on the 3 steps, that leaves just one question!

Rules for subtraction to 10

There are two ways to consider subtraction - take away and finding the difference. In most questions, one of these is easier to use than the other. Illustrate this on a number line.

Rule - If the numbers in the subtraction question are far apart and one number is small, subtract by taking away that number. If the numbers are close together, subtract by finding the difference between the numbers. For example, it is much easier to find the difference in $10 - 8$ than to say '10 take away 8'.

Addition 11 to 18

<u>11</u>	<u>12</u>	<u>13</u>	<u>14</u>	<u>15</u>	<u>16</u>	<u>17</u>	<u>18</u>
9 + 2	9 + 3	9 + 4	9 + 5	9 + 6	9 + 7	9 + 8	9 + 9
8 + 3	8 + 4	8 + 5	8 + 6	8 + 7	8 + 8		
7 + 4	7 + 5	7 + 6	7 + 7				
6 + 5	6 + 6						

Rule 1 - Always begin adding with the largest number. That cuts the number of problems in half!

Rule 2 - Pretend 9 is 10, add the 10 and subtract 1 - the ones number in the answer will be one less than the number you are adding to the 9.

Rule 3 - Pretend 8 is 10, add the 10 and subtract 2 - the ones number in the answer will be two less than the number you are adding to the 8.

Rule 4 - Memorize the doubles.

Rule 5 - If the numbers you are adding are just one apart, double the smaller number and add one. $7 + 8 = 7 + 7 + 1 = 15$

How many questions are left? Just $7 + 4$ and $7 + 5$!

Subtraction 11 to 18

Rule 1 - Remember there are two ways to subtract - take away and find the difference.

Rule 2 - When subtracting 9, subtract 10 and add 1.

Rule 3 - When subtracting 8, subtract 10 and add 2.

Rule 4 - Use the doubles to subtract... $16 - 8 = 8$

That still leaves many questions.

For $15 - 8$: draw a ladder with 3 rungs. The bottom rung would be labelled 8, the middle 10 and the top 15. The children know that it is 2 steps from 8 to 10, and 5 steps from 10 to 15, so $2 + 5 = 7$.

One more: $12 - 7$... bottom step 7, middle step 10, top step 12 ... $3 + 2 = 5$

Call this the 'in between' method - for $15 - 6 = 9$ put 15 10 6 There is 5 and 4 in between = 9

Some students may see the difference better if the numbers are in order.....

6 10 15, so they are adding $4 + 5$.

Or..... you can make 14 into $10 + 4$, then subtract from the 10 and add this to 4.

All About 11

11 is $10 + 1$.

Draw 11.

$11 = \underline{\quad} + 8$

$11 = \underline{\quad} + 6$

$11 = 9 + \underline{\quad}$

$11 = 5 + \underline{\quad}$

Multiplication

1. Teach the students what the equations mean: 3×4 means 3 fours, 4×3 means 4 threes.
2. Make sure they understand that reversing the numbers gives the same answer.
3. Teach the $\times 2$ equations, and the reverse operations. As the students can count by 2s this should be easy.
4. Teach the $\times 5$ equations and the reverse operations. As the students can count by 5s, this also should be easy.
5. Teach skip counting by 3 to 30 and by 4 to 40.
6. Relate the 3 and 4 times tables to the skip counting. Memorize the more difficult ones - 6×3 , 7×3 , 8×3 ... and 6×4 , 7×4 , 8×4
7. Teach the $\times 9$ trick..... if there is a 9 in a question - the first number in the answer will be one less than the number you are multiplying by 9, and the two numbers in the answer will add up to 9. So when multiplying 6×9 , the first number in the answer is 5 (one less than the 6) and the second number will be 4 because $5 + 4 = 9$ 54! Practice this until the children can do it really quickly every time they see a 9 in a question.
8. Teach these three doubles... 6×6 , 7×7 and 8×8 and memorize the answers.
9. That leaves only three questions to learn! If the children memorize the answers to 6×7 , 6×8 , and 7×8 - they will know all the times tables to 9.

Here is another $\times 9$ trick! Lay your hands out on the desk in front of you. Pretend your fingers (and thumbs) are numbered 1 to 10, left to right. Now when you get a 9 question, put under the finger of the number you are multiplying by 9. Then the answer is the number of fingers on either side of this finger. For example, if you are doing 4×9 , put under the left hand pointer (the 4th finger). There are 3 fingers left up on the left and 6 on the right..... 36.

The 'can you count' trick is fun, too. When multiplying 3×4 , the answer is 12.... count 1 2....3 4. The same thing happens with $7 \times 8 = 56$ count 5 6 7 8.

The times tables with a 4 in the question are double-doubles! Do $\times 2$, twice. 4×6 is the same as $2 \times 6 + 2 \times 6$ $12 + 12$.
